Emiliano Pisu

Senior Frontend Engineer # AI Product Engineer Design Engineer
Accessibility & WCAG Advocate ♂# Your friendly neighborhood
interactive things nerd Speaker Sensei & Co-host @ DevDojo IT
Rome, Latium, Italy

Summary

Hi Folks I'm Emiliano Pisu, your friendly neighborhood Senior Frontend Engineer, AI Product Engineer and Design Engineer. I work as a freelance professional, helping teams design, build and ship accessible, scalable and high-quality digital products. Throughout my 27+ years in the industry, driven by a deep passion for coding, product craftsmanship and continuous learning, I have always stayed close to the evolution of the web platform, frontend architecture and modern digital product development. My work focuses on UI, UX, Accessibility, Responsiveness, Compatibility, Scalability, Performance and Maintainability. As a Senior Frontend Engineer and Design Engineer, I build accessible, robust and pixel-perfect user interfaces that improve the user experience while making the developer experience smoother, clearer and more sustainable. My core approach is based on the native web platform, semantic HTML, modern CSS, vanilla JavaScript and zero-dependency thinking. I believe that truly understanding the foundations of the web leads to better decisions, cleaner architectures and more durable products. As an AI Product Engineer, I help teams integrate AI into real-world workflows, tools and applications, with a strong focus on practical value, product thinking, repeatable processes and engineering quality. For me, AI is not just about automation. It is a way to amplify creativity, improve delivery, reduce friction and build better tools for people. As a Mentor, I am deeply committed to knowledge sharing, technical growth and community work. Through my experience as Sensei and Co-Host @ DevDojoIT, I support developers who want to grow in the frontend world, improve their craft and design more accessible, maintainable and scalable interfaces. As a Speaker, I bring talks and workshops about modern CSS, frontend architecture, accessibility, design engineering, AI-assisted development and the future of the web platform. In conclusion, I am the right person if you need a bus between Design, Development, AI and Product. I live to simplify complexity, improve DevX and advocate for the core

technologies of the web, rigorously vanilla, accessible and built to last.

Experience

Emiliano Pisu

Senior Frontend Engineer

April 2019 - Present (7 years 1 month)

Rome

Freelance Consultant focused on Senior Frontend Engineering, Design Engineering and AI Product Engineering.

With 27+ years in the industry, I help teams and companies design, build and improve modern, accessible, high-performance and sustainable digital products.

My work sits at the intersection of design, development, AI and product. I translate business needs, visual systems and technical requirements into solid, scalable and maintainable frontend solutions.

As a Senior Frontend Engineer and Design Engineer, I work on UI engineering, design systems, component libraries, frontend architectures, semantic HTML, modern CSS, JavaScript, accessibility, performance and maintainability.

I have deep experience with React and mainstream frontend frameworks, but my approach remains grounded in clarity, reliability and long-term technical sustainability. I am equally comfortable working with vanilla JavaScript, Custom Elements, progressive enhancement and zero-dependency architectures built on the native web platform.

As an AI Product Engineer, I support teams in integrating AI into real-world workflows, tools and applications, with a strong focus on practical value, repeatable processes, product thinking and engineering quality.

I often help companies with accessibility and WCAG audits, frontend quality reviews, component design, design-system maturity, performance improvements, architectural decisions and more effective development workflows.

As a mentor and technical partner, I also support developers and cross-functional teams through hands-on knowledge sharing, technical guidance and collaboration between design, development and product.

I bring value both as a senior individual contributor and as a consultant who can connect vision, execution and technical culture.

My goal is simple: build thoughtful products, improve DevX, help teams grow and make the web better, one component at a time.

Dev Dojo IT

Sensei & Co-host

December 2024 - Present (1 year 5 months)

Rome

Mentor, Sensei and Co-Host @ DevDojoIT, focused on frontend education, knowledge sharing and community growth.

After 27+ years in the industry, I am in a phase where mentoring has become one of the most meaningful parts of my work. The web community has given me knowledge, opportunities, inspiration and a professional path. Today, I try to give part of that value back by helping developers grow with clarity, confidence and practical guidance.

At DevDojoIT, my role is centered on education, mentorship and community building. I support developers who want to improve their frontend skills, understand the web platform more deeply and build interfaces that are accessible, scalable, maintainable and respectful of users.

As a mentor, I help people navigate the constantly evolving frontend landscape, from semantic HTML, modern CSS and JavaScript to accessibility, UI architecture, design systems, performance and AI-assisted development workflows.

My approach is practical, honest and hands-on. I believe that good mentoring is not about giving shortcuts, but about helping people develop better mental models, stronger technical judgment and a more sustainable way to learn.

Through DevDojoIT, I contribute to a culture of sharing by creating learning resources, hosting live coding sessions, supporting workshops, encouraging

technical discussions and helping developers connect theory with real-world practice.

I care deeply about making knowledge more accessible. This means explaining complex topics in a clear way, giving constructive feedback, encouraging experimentation and helping newcomers and experienced developers find common ground.

My mission as a mentor is simple: help people become more confident, more aware and more independent as developers.

The web gave me a career, a community and a craft. Through mentoring, teaching and community work, I try to pay it forward.

MONK Software

Frontend Development Lead & Mentor

September 2022 - February 2025 (2 years 6 months)

Roma, Lazio, Italia

Technical Leadership and Team Management: Assumed responsibility for leading a team of frontend developers, managing task distribution, providing technical support, and ensuring projects are completed according to specifications and timelines.

Code Review and Mentorship: Conducted regular code reviews, providing constructive feedback and promoting best practices. Acted as a mentor to junior team members, facilitating their professional growth.

Project Management: Participated in project planning and management, contributing to requirements definition, time estimates, and resource management to ensure project success.

Training and Documentation: Developed detailed technical documentation and conducted internal training sessions to ensure the team was up-to-date with the frontend technologies and methodologies used.

Continuous Support and Maintenance: Managed post-release support and maintenance of applications, swiftly resolving issues and implementing continuous improvements.

Project: Section Framework

- Client: internal
- Role: Tech Lead
- Software Type: Frontend Framework
- Technologies: HTML5, CSS3, SCSS, Javascript, Typescript
- Description: Frontend Framework for Web Applications (MPA, SPA, SSR, SSG), designed and implemented from scratch using exclusively vanilla technologies (HTML, CSS, pure JavaScript), eliminating dependencies on external frameworks to ensure maximum performance and minimal footprint

Project: MonkUI

- Client: internal
- Role: Tech Lead
- Software Type: UI Kit & Design System
- Technologies: HTML5, CSS3, SCSS, Javascript, Typescript
- Description: Frontend UI Kit & Design System, use-case agnostic, WCAG 2.2 AA compliance, responsive design, and UI/UX principles, ensuring that the developed applications are user-friendly, accessible to all users, and adaptable to various devices and screen sizes

Assist Digital

Senior UI/UX Engineer & Mentor

April 2019 - September 2022 (3 years 6 months)

Roma, Italia

as a Developer:

Many different projects for the major Italian and international customers of Assist Digital, just a few examples

Project: MySupport

- Client: Team System S.p.A.
- Role: UI/UX Development Lead
- Software type: Web Application
- Technologies used: Angular + HTML5 + CSS3
- Description: Customer and Administration Areas for a Ticket Management System and Online Courses

Project: After sales

- Client: Gucci S.p.A.
- Role: UI/UX & Frontend Developer
- Software type: Web Application
- Technologies used: React + HTML5 + CSS3 + Semantic UI + graphQL

- Description: Customer After Sales Ticket Management System, progress tracking, managing and delivery

Project: GeoWeb (formerly Mind)

- Client: Munich RE
- Role: UI/UX & Frontend Developer
- Software type: Web Application
- Technologies used: Angular + HTML5 + CSS3 + custom UI Kit
- Description: Re-insurance Risk Assessment and Management, with the aim to preview and manage business and rescue services in case of Climatic Events

Project: MyBusiness

- Client: Vodafone S.p.A.
- Role: Frontend Developer
- Software type: Hybrid Mobile Application
- Technologies used: AngularJS + HTML5 + CSS3
- Description: Business Customer App

as a Mentor:

Organization and presentation of a course concerning Frontend in general and more specifically in UI/UX Engineering

Lessons:

- Typography (Typeface, Fonts, Font Stacks, Variable Fonts)
- Layout & Responsive (Mobile First, Gridless Design, Asymmetric Design)
- HTML with CSS superpowers (Grid & Flex, Container Queries, Scrollsnap, CSS Layers)
- Color Theory (Color Wheel, HSL, Palettes, Shadows)
- A11y (Accessibility)
- Best Practices, Performances & Tooling
- Design Analysis (Discussions about analyzing and implementing a design)
- Forms (Managing & Customizing User Input, Custom UI Form controls, Validation)
- Web Components (Designing and Implementing Custom Elements)

Autonomo

Senior UI/UX Engineer

April 2013 - April 2019 (6 years 1 month)

Roma

Many different projects and corporate websites, just a couple of examples:

Project: Ticket System

- Client: Thera s.r.l.
- Role: Full-stack Developer
- Software type: Web Application
- Technologies used: ASP.NET MVC + WCF + HTML5 + CSS3 + jQuery + SQL
- Description: Customer Ticket Management System, tracking progress, managing and assigning tasks to the development team

Project: Alitalia Online Booking

- Client: Engineering S.p.A. through Thera s.r.l.
- Role: Web Developer
- Software type: Web Portal
- Technologies used: ASP.NET MVC + WCF + HTML + CSS2 + jQuery + SQL
- Description: Alitalia portal for searching, booking, and ticketing of flights for the national airline

RealVirtual s.r.l.

Senior Frontend Engineer

September 2012 - April 2013 (8 months)

Anagni

Project: RealVirtualCMS

- Client: Internal
- Role: Web Solution Architect / Web Designer / Web Developer
- Solution type: CMS
- Technologies used: ASP.NET Razor + HTML5 + CSS3 + Javascript + jQuery + JSON + Kendo UI
- Description: CMS for internal use based on RazorC.net

Creation and maintenance of various websites.

Timesys S.r.l.

Senior Solution Architect

May 2012 - August 2012 (4 months)

Cassino

Project: Milletrix

- Client: Internal
- Role: Solution Architect / WinForms Developer

- Solution Type: Windows Application
- Technologies used: Windows Forms + LINQ + RegEx + XML + SQLite
- Description: The application is designed to cooperate with a series of baropodometric platforms of different types in order to acquire data on posture, position of the feet and back, with two-dimensional and three-dimensional views of the acquired data. All data is encoded and reprocessed and then sent to the ReBioDes data analysis software

Project: ReBioDes

- Client: Internal
- Role: Solution Architect / WinForms Developer
- Solution type: Windows Application
- Technologies used: Windows Forms + LINQ + RegEx + XML + SQLite
- Description: The application was created to manage and analyze the data produced by the Milletrix software, in order to create an intelligent medical report that helps orthopedic doctors to prescribe insoles and / or specific analyzes or therapies for the various possible pathologies of patients.

Thera s.r.l.

Senior Full-stack Developer

2007 - March 2012 (5 years)

Roma

Project: Accident at work Management

- Client: Autostrade S.p.A.
- Role: Full-stack Developer
- Software type: Web Application
- Technologies used: ASP.NET + HTML + CSS2 + Javascript + Adobe Flash + SQL
- Description: Create and manage an accident at work archive, the system provides a flash application to create a graph in order to better understand the event.

Project: INPS

- Client: Elsag-Datamat S.p.A.
- Role: Developer Analyst
- Software type: Components for web portal
- Technologies used: ASP.NET + Web Services + HTML + CSS2 + jQuery + SQL
- Description: Management system and menu profiling of services to the citizen

Project: GEA

- Client: Baicr S.C.A.R.L.

- Role: Developer

- Software type: Windows Forms Management Application + Web Portal

- Used technologies: Visual C# + ASP.NET + Web Services + HTML + CSS2 + jQuery + SQL

- Description: Application aimed at managing the document archiving of the Company's Historical Archives.

Zucchetti Software s.r.l.

Mid Frontend Developer

2005 - 2007 (2 years)

Roma

SitePainter and Corporate Portal projects development

Sistemi 2000 s.r.l.

Mid Frontend Developer

2005 - 2005 (less than a year)

Roma

Various projects maintenance

Thera s.r.l.

Junior Full-stack Developer

2002 - 2005 (3 years)

Roma

Various projects creation and maintenance

S.I.S.I. Informatica 2000 s.r.l. - Gruppo FIT (Federazione Italiana Tabaccai)

Junior Full-stack Developer

2001 - 2002 (1 year)

Roma

Windows-based application developer

Alpha Logic S.p.A.

Junior Developer

2001 - 2001 (less than a year)

Roma

Windows-based application developer
